Abdus Salam ICTP, Trieste, Italy

Friday, April 17, 2009

Coffee, tea, cookies: 3:30pm

Talk: 4-5pm

929 Massachusetts Ave., Cambridge, Suite #102

Abstract: In this lecture, we shall consider how to decide if two singularities can be considered of the same type. This problem began with O. Zariski 45 years ago, and has not yet received a proper answer. We shall first give an overview of the known results, and then indicate what are the basic problems to be solved.

The Worldwide Center of Mathematics, www.centerofmath.org, is located midway between Harvard and Central Squares, at 929 Massachusetts Avenue, Cambridge, MA, in Suite #102. Travel to the Center by public transportation is easy via the #1 bus, or by taking the subway (the T) to Central Square, and walking for 10 minutes. Suite #102 is located on floor 01, which is distinct from floor 1.

All attendees will need to sign a release form, as the lecture will be recorded for distribution on the Web.
